SKILLS

- Swift, SwiftUI, GraphQL, Operating System, Xcode, iOS development, Data Structures and Algorithms

EXPERIENCE

- CheQ** June 2024 to Present
 - Worked on features like **bottom sheets, reusable custom widgets, collection views and table views**.
 - Developed pages Story to sum up users with **audio handling, API integrations** and shareable **screenshots**.
 - Worked on pages like BBPS payments and loan tabs built from scratch with animations, improving CVR by 10%.
 - Worked on features like Force Update Prompt for the user, improving the update rate for the user base by 5%
 - Developed pages like **login** and **Signup** pages and solved bugs and **Crashlytics** errors, reducing bugs by 30%.
 - Developed Pages like **My Account Page** and **Side Drawer**. Improved authentication of the application.
 - Integrated **API** and **Web Views**, completed pages like Help and Support and released the app every week.
- Expedia Group** Jan 2023 to May 2024
 - Revamped and created new components for the Activities search result page using **SwiftUI** and **GraphQL**, achieving a CVR gain of over 3%. Designed and implemented new **GraphQL nodes** to improve Activities UI.
 - Authored and proposed a POC for **Maestro**, a **UI testing framework**, leading to an 80% reduction in development time during testing.
 - Did multithreading using **Operations and Dispatch Groups**, causing a reduction of page **load time** by 5%.
 - Wrote code considering **Memory Management, ARC, Thread safety, Application states, and Protocol orientation**, which enhanced the code quality and reduced RAM consumption of the app.
 - Worked closely with the **Design** and **Backend Teams** while developing and supported the **QA Team** while Testing. Managed an efficient communication channel between teams while delivering under strict timelines.
 - Created a Carbon efficiency prompt for flight booking flow, resulting in a CVR increase of 4%.
 - Developed **Server-Driven UI** components for the Offers Section, resulting in a **CVR increase of over 2%**.
 - We have implemented event analytics and **Accessibility features** to enhance user experience.
 - Fixed critical blockers during release weeks to ensure timely releases.
 - Managed PagerDuty responsibilities, using **Splunk and Datadog** for monitoring and alerting.
- OLA Cabs** Jan 2021 to Jan 2023
 - Worked on OLA's [Customer](#) and [Driver](#) apps and integrated designs from **Figma** and **Lottie animation** files, reducing page load time **by 20%**.
 - Interned here for 6 months, developed pages like login and Signup pages and solved bugs and Crashlytics errors.
 - Developed projects using **MVVM, MVC, Delegate and Protocol, and Singleton** design patterns.
 - Used and updated **CocoaPods** and **Carthage**, made **Custom UIViews** using **XIBs** and **added them to Flamingo**. Made reusable **UIs** using **Auto-Layout** for the App, reducing project file size **by 2%**.
 - Also worked on **API calls, AlomaFire, NSURLSessions, NSUserDefaults, CoreData, and Flamingo**.
 - Developed the cab allocation flow, including features like Stock-out-flow, which suggested rides to users when no cabs were available, **increasing conversion rates by 5%**.
 - Wrote Unit test cases and UI tests for existing and new features using **XCTest** and **XCTestCase frameworks**. **Increasing the test coverage by 30%**.
 - Led the app's design to revamp, implemented the **Selfie Auth feature**, created a custom **TabBar** with **animations** and **notifications**, and managed external map functionality and **Deeplinks**.

EDUCATION

Computer Science and Engineering | LNM Institute of Information Technology, Jaipur | August 2017 - June 2021

PERSONAL PROJECTS

- GitHub Followers**: an App to check on the GitHub profiles of others and followers.
 - Made an application where users can see a list of followers of any GitHub account, add any account to their favourite list, and see the GitHub profile in a **webView**. Technologies used to develop the same **Swift and Xcode**.
 - Used **NSURLSession for API calls** to get data from git APIs and **NSUserDefaults** for storing favourites.
 - Also implemented a **SearchBar view**, making it **interactive** and **responsive** on every tap from the keyboard.
 - Used **UI Collection View, TableView** and **Control Flow layout** to display the list of favourites and followers.
- AddStory**: a startup idea for an App to find influencers to promote your product.
 - A platform for marketers** to use for marketing and promotions. Create templates and posters and upload them to Adstory for **users and influencers** to promote through social media. This reduces the effort to find people for promotion. Technologies used to develop the same: **Swift, iOS App development tools, Core Data, Firebase**.
